## 4.1.4 Function Documentation

### 4.1.4.1 `rdc_init()`

```
rdc_status_t rdc_init (
    uint64_t init_flags )
```

Initialize ROCm RDC.

When called, this initializes internal data structures, including those corresponding to sources of information that RDC provides. This must be called before `rdc_start_embedded()` or `rdc_connect()`

#### Parameters

<code>in</code>	<code>init_flags</code>	init_flags Bit flags that tell RDC how to initialize.
-----------------	-------------------------	---

#### Return values

<code>RDC_ST_OK</code>	is returned upon successful call.
------------------------	-----------------------------------

### 4.1.4.2 `rdc_shutdown()`

```
rdc_status_t rdc_shutdown ( )
```

Shutdown ROCm RDC.

Do any necessary clean up.

### 4.1.4.3 `rdc_start_embedded()`

```
rdc_status_t rdc_start_embedded (
    rdc_operation_mode_t op_mode,
    rdc_handle_t * p_rdc_handle )
```

Start embedded RDC agent within this process.

The RDC is loaded as library so that it does not require `rdcd` daemon. In this mode, the user has to periodically call `rdc_field_update_all()` when `op_mode` is `RDC_OPERATION_MODE_MANUAL`, which tells RDC to collect the stats.

## Parameters

in	<i>op_mode</i>	Operation modes. When RDC_OPERATION_MODE_AUTO, RDC schedules background task to collect the stats. When RDC_OPERATION_MODE_MANUAL, the user needs to call <a href="#">rdc_field_update_all()</a> periodically.
in, out	<i>p_rdc_handle</i>	Caller provided pointer to <code>rdc_handle_t</code> . Upon successful call, the value will contain the handler for following API calls.

## Return values

<a href="#">RDC_ST_OK</a>	is returned upon successful call.
---------------------------	-----------------------------------
